Experience

Associate Software Engineer

Jan 2025 - Present

Nagarro

Gurugram, Haryana

- Developed end-to-end ETL pipelines using **Python**, **SQL**, **Kedro**, **Amazon S3**, and **Redshift** for automated processing of enterprise data.
- Designed and implemented a scalable Data Quality Framework for **Johnson n Johnson (JnJ)**, processing highly unstructured datasets using reusable validation modules.
- Developed end-to-end **Kedro ETL pipelines** for enterprise data ingestion, applying data modelling principles and scalable transformation logic for downstream analytics.
- Developed backend automation solutions using **Python**, **SQL**, and **Snowflake** to streamline reporting workflows, reducing manual operational effort by **90%**.
- Designed scalable backend data processing layers using **data modelling principles**, normalized schemas, complex SQL CTEs, and reusable validation frameworks to improve reporting accuracy and maintainability.
- Integrated **Airflow** and **Azkaban** workflows with **ServiceNow** for automated incident generation and monitoring during pipeline failures.
- Implemented CI/CD and deployment automation practices using **Azure DevOps**, **GitHub Actions**, **Docker**, and **Kubernetes** to improve release efficiency and infrastructure reliability.

Projects

Enterprise Data Quality Framework (Johnson n Johnson)

Nagarro

mar 2026 - june 2026

- Developed end-to-end **Kedro ETL pipelines** to ingest data from SharePoint and Amazon Redshift into Amazon S3 for enterprise data processing.
- Designed and implemented a scalable Data Quality Framework for **Johnson n Johnson (JnJ)** to validate highly unstructured datasets using reusable validation modules.
- Automated schema, null, duplicate, datatype, and cross-dataset validation with configurable rules, improving data consistency and reducing manual validation effort.
- Built modular pipeline orchestration with centralized logging and exception handling to improve pipeline reliability and maintainability.

End-to-End Kubernetes-Based Deployment and Monitoring

Nagarro

Feb 2025 - May 2025

- Designed and deployed a full CI/CD pipeline to automate build, testing, Docker image creation, and Helm-based deployments, reducing release effort and manual intervention by 50%.
- Architected scalable Kubernetes workloads using **Deployments**, **Services**, **PV/PVC**, **ConfigMaps**, and **Secrets**, enabling reliable deployment of production-ready microservices.
- Implemented a centralized monitoring stack using **Prometheus** and **Grafana** for real-time observability, with **Helm**-based automated provisioning for reproducible deployments across environments.

Technical Skills

Backend Development: Python, SQL, Node.js, Flask, REST APIs, MVC Architecture

Data Engineering: Databricks, Apache Spark, ETL Pipelines, Data Modelling, Data Warehousing

AI/ML: Machine Learning Fundamentals, LLM Fundamentals

Databases & Data System: MySQL, Snowflake, Amazon Redshift, ETL Pipelines, Apache Spark

DevOps & Cloud: AWS, Docker, Kubernetes, Terraform, CI/CD (GitHub Actions, Jenkins), Ansible

Tools and Platforms: Apache Airflow, Azkaban, Prometheus, Grafana, Azure DevOps, GitHub

Certifications & Achievements

Microsoft Certified: Fabric Data Engineer Associate – Microsoft

Databricks Certified: Data Engineer Associate and Professional – Databricks

Education

USICT, Guru Gobind Singh Indraprastha University

Nov 2021 – May 2025

B. Tech in Computer Science and Engineering CGPA:8.66

Delhi, India
